

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (previously presented) A process comprising:
  - (a) contacting a fuel containing organosulfur impurities with an organic hydroperoxide in the presence of an oxidation catalyst to form an oxidized fuel, wherein a substantial portion of the organosulfur impurities are converted into sulfones and a residual amount of organic hydroperoxide remains in the oxidized fuel;
  - (b) extracting the sulfones from the oxidized fuel to form a fuel having a reduced amount of sulfones and a residual amount of organic hydroperoxide; and
  - (c) contacting the fuel from step (b) with a Group 4 to 11 transition metal-containing decomposition catalyst at a temperature in the range of 20 to 150°C.
2. (original) The process of claim 1 wherein the organic hydroperoxide is tertiary butyl hydroperoxide.
3. (original) The process of claim 1 wherein the oxidation catalyst is a titanium-containing silicon oxide catalyst.
4. (original) The process of claim 1 wherein the sulfones are extracted by solid-liquid extraction using at least one sulfone adsorbent.
5. (original) The process of claim 1 wherein the sulfones are extracted by liquid-liquid extraction using at least one polar solvent selected from the group consisting of a C<sub>1</sub>-C<sub>4</sub> alcohol, a C<sub>3</sub>-C<sub>8</sub> ketone, water, and mixtures thereof.
6. (original) The process of claim 5 wherein the polar solvent is a mixture of methanol and water.

**7.** (previously presented) The process of claim **1** wherein the Group 4 to 11 transition metal-containing decomposition catalyst comprises a Group 4 to 11 transition metal and a support.

**8.** (original) The process of claim **7** wherein the Group 4 to 11 transition metal is selected from the group consisting of chromium, titanium, manganese, vanadium, iron, ruthenium, cobalt, and mixtures thereof.

**9.** (original) The process of claim **7** wherein the Group 4 to 11 transition metal is selected from the group consisting of chromium, titanium, iron, and mixtures thereof.

**10.** (original) The process of claim **7** wherein the support is selected from the group consisting of silicas, aluminas, silica-aluminas, and carbon.

**11.** (original) The process of claim **7** wherein the decomposition catalyst comprises chromium, silica, and optionally titanium.

**12-20.** (canceled)
